WHY US?

‘OUR KEY DRIVE IS TO MAKE OUR CLIENT’S WISHES REALITY’

The world-wide realization of heavy, technical complex and/or architectural steel constructions demands a special approach, an approach which Smulders Group has mastered. The designs are complex, there are extensive requirements and the projects are often large scaled. In short, technically challenging projects which Smulders Group likes to sink its teeth into.

Our key drive is to make our client’s wishes reality. By combining our passion and enthusiasm for steel with our experience and expertise, our products are unequalled anywhere in the market. Our motto “think twice first, before you start creating” means our products are meticulously constructed with the utmost care and quality.

A vision which is realized by self-managing as much as possible, from basic engineering to assembly on location. Smulders Group has sufficient capacity and know-how to complete any project.

Through internationally gained experience in several sectors, Smulders Group has mastered all facets of steel construction. The impressive list of references supports this. No architectural building in too complex for Smulders Group, no bridge too far, no (petro) chemical installation too large and no power plant too difficult. But, smaller projects are no problem either; the short lines within the project driven organization make anything possible.

Raf Iemants

CEO Smulders Group

Using a well-thought-out mix of locations, capacity and facilities, Smulders Group has optimally geared itself towards the production of high-grade steel constructions.

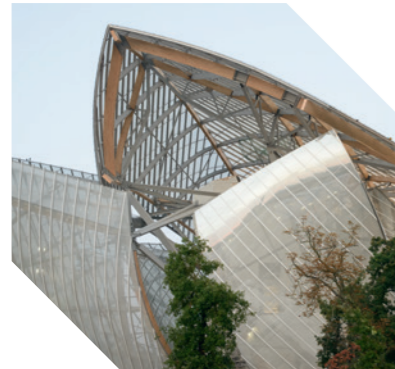

ARCHITECTURAL CONSTRUCTIONS

When it comes to eye-catching architectural and high-rise steel constructions, Smulders Group has built a nice track record throughout the years. Because it often concerns buildings that are based on a complex design, Smulders Group is very conscious of the necessity to think along with the architect when it comes to offering technical solutions. In such cases, Smulders Group always stretches the envelope in aiming to realize the design, no matter how complex.

Due to the presence of the necessary expertise within the engineering department, Smulders Group is able to make a good translation from the concept design into a technically producible, economically justifiable and reliable steel construction.

BRIDGES

Whether it's an artistic, complex or functional bridge design, Smulders Group has made them all already and will never refuse a new challenge. We always think along with our clients and offer them the best solution.

Smulders Group not only constructs new bridges, we also renovate existing bridges in order to extend their lifetime. We deliver temporary bridges as well, which are quickly (dis-)assembled, are transportable and can often provide a quick solution for road work.

Smulders Group is not unfamiliar with installing a bridge within one night or a weekend. This is made possible by flexible project management and having the right facilities and manpower.

RENOVATION

Closing down a factory, exhibition halls, buildings,... temporarily because of renovation activities can be very costly and demand a permanent occupation for the renovation activities during this 'stand still'. Working outside of normal production hours in such cases is not a problem for Smulders Group. The different production phases are well divided and, through tight planning, steel constructions or crane gantries can be responsibly and quickly replaced or renovated.

HIGH-GRADE INDUSTRIAL CONSTRUCTIONS

The high-grade industrial constructions product group is the result of the experience gained in the (petro) chemical sector and has formed itself into a core business for designing and producing (petro) chemical installations, conventional (classic) and nuclear power plants, cranes and other heavy industrial constructions.

Due to the extensive experience gained throughout the years, Smulders Group has a global leading position when it comes to creating constructive solutions for very complex problems and offering guaranteed quality, in accordance with the most recent standards and safety requirements.

SMULDERS GROUP WILL FULFIL THE CLIENT'S REQUIREMENTS

HEALTH, SAFETY & ENVIRONMENT

Passion can only grow in a safe and clean environment. That's what we want to create, not only through our activities in the renewable energy market, but certainly through our focus on health and safety in our projects. We want people to leave our facilities at the end of the day with a smile on their face. Only through the utmost care and control can Smulders Group perform in a safe and sustainable way.

Carla Wellens
HSE Manager

Safety is to us more than understanding the safety statistics. We strive each day to learn from our or other's faults and take the necessary actions. We aim for a high standard of safety. This dynamic can only be reached with an open minded organization where people understand the specific roll towards safety, where people are appreciated for reporting unsafe behavior and propose ideas to improve accordingly.

QUALITY

Our quality is unsurpassed. It is continually monitored and guarded by our complete project teams from our project managers through to our quality departments and engineers and finally to our workforce. When it comes to quality everyone contributes and takes great pride in delivering our products with zero defects.

The welding work is executed with modern equipment by certified personnel, according to qualified processes. Surface treatment is applied according to specific requirements, and continual investigation is done into the newest techniques for environmentally friendly application of high standard paint spray systems.

The Smulders Group facilities are certified according to ISO 9001, ISO 14001, OHSAS 18001, VCA**, EN1090 EXC 4, DIN 18800-7 and EN ISO 3834-2

A FLEXIBLE PRODUCTION PROCESS HAS BEEN CREATED

ENGINEERING

A globally unique feature of Smulders Group is its large in-house engineering department. Experienced engineers take care of the design and assessment of the desired components according to the required standards and quality demands. The engineering department houses approx. 15 highly qualified static engineers, and over 50 draftsmen spread across the facilities in Arendonk, Balen and Bangalore (India). Overall and detailed drawings are produced within the headquarters. A significant head start in efficiency is made by taking the practical execution into account from the very start, as well as the possibilities and restrictions of the logistical process.

SURFACE TREATMENT

Surface treatment is considered a critical process in the fabrication of steel structures and as such, Smulders Group has continuously invested in the right people and facilities. All surface treatments are performed by our own staff within our own facilities, ensuring that not even a single square millimeter misses the required standards. All production facilities have their own shot-blasting cabins and a paint spray hall in which the capacity is attuned to both the market demand and the product portfolio.

LOGISTICS

Our logistics department continuously has many trucks on the road. Exceptional sizes and freights up to 130 ton can be transported by in-house logistical means. For extreme transports we use the canals. Smulders Group has direct access to the Antwerp and Flushing harbors, from which transports can be carried out worldwide. The years of experience in transporting constructions or parts thereof to countries like Saudi Arabia, Jamaica, Libya and Nigeria, is proof that no country is unreachable for Smulders Group.

ASSEMBLY

The welders and technicians are used to executing their work under extreme circumstances. This regularly involves working at great heights. It goes without saying that the safety of our employees can never be compromised, which is why Smulders Group always prefers to be safe rather than sorry and continuously invests in safety measures and material. Therefore, all required safety certificates are in place. The whole policy is aimed at obtaining, retaining and observing them. Every employee is VCA certified and are experienced and well trained.

THINKING ALONGSIDE AND EMPATHIZING WITH THE CLIENTS ENSURES THAT CLIENTS CAN ALWAYS COUNT ON US, EVEN AFTER A PROJECT IS FINALIZED
